PP CosmoTop

The next generation tube closures

PP CosmoTop

The next generation tube closures

The next generation tube closures from Weener offer a lot of unique benefits that meet today's market demand. This new CosmoTop range is the first lightweight tube closure range with two design options. The flexible twin-tooling concept, designed and developed by Weener, gives many advantages and opportunities.

Stylish

These distinctive closures have an exclusive appearance and are especially designed for the Personal Care sector. Two elegant designs are offered: the straight version called *Classy* and the rounded version called *Style*. The advanced production process and handling secure the high visual quality.

Sustainable

Thanks to the clever design and excellent material, the closures are significantly lighter than competitive closures in the market. This sustainable lightweight solution protects the environment and lowers the carbon footprint.

Cost-effective

Material savings and weight reduction obviously result in cost savings. Not only because less material is used, it also means less waste, rejects and energy usage during production. This benefit also contributes to an environmentally solution.

Full range

The *Classy* and *Style* closure designs are available in a matt and a glossy surface finish. All versions will be available in 3 diameters: 35, 40 and 50 mm. Together with the different orifice sizes, there will be 36 different variations in total. The closures can also be decorated, for example by hot stamping. Furthermore, the closure lid can be easily customized thanks to the smart and flexible tooling concept that has been developed by Weener.

Unique Benefits

- Lightweight closure range
- Full range – 12 designs
- High visual quality
- Easy customization
- Solid Weener hinge
- Silent opening
- Front closing
- Flexible tool concept
- Hot stamping decoration

Specifications

- Push-on application to enable orientation
- 3 diameters available:
